For a Cleaner  
and  
Healthier Environment  
TO PREVENT STORMWATER POLLUTION

## A Guide for the Food Service Industry

### Inside Activities

- 1.** Pour washwater into a janitorial or mop sink. Don't pour it onto a parking lot, alley, sidewalk or street.

Clean floormats, filters and garbage cans in a mop sink or over an internal floor drain. Don't wash them in a parking lot, alley, sidewalk or street.

- 3.** Recycle grease and oil. Don't pour them into sinks, floor drains, or onto a parking lot or street.

### Outside Activities

- 4.** Use dry methods for spill cleanup. Don't hose down spills.

- 5.** Keep dumpster areas clean and lids closed. Don't fill dumpsters with liquid waste or hose them out.

- 6.** Regularly clean up parking lots and the outside area surrounding the restaurant. Sweep up food refuse, cigarette butts and other trash and debris from outside areas.

### Did You Know?

It is illegal and environmentally harmful to discharge wastewater or water containing soaps, detergents, cleaning products, grease, etc., into storm drain inlets.

Storm drains were designed to capture and transport rainwater runoff into community waterways to prevent flooding, but the same inlets can carry pollution (detergents, disinfectants, grease, trash, etc.) to the nearest neighborhood creek. *Anything entering a storm drain is discharged untreated into the community waterways.*
